

**FACILITY
RISK MITIGATION**

PASport™

**Terminal Air Filtration
Test System**

BENEFITS

PASport™ System for HEPA filter Validation offers certainty. PASport™ helps ensure that intact filters are not replaced, and more importantly, that compromised filters are identified before a catastrophic event occurs.

PASport™ System provides repeatable and verifiable results. Installed one time for a very reasonable cost, the PASport™ System lasts the life of the cleanroom and provides substantial ROI in time and cost saved during each certification event.

DID YOU KNOW?
**You CAN reduce your cleanroom
air quality risks!**

**Ensuring HEPA filters are
uncompromised is a critical
component of any sterile
environment.**

PASport™ System reduces your cleanroom air quality risks.

One contaminated batch can result in a recall that can cost millions of dollars in:

- Recall activities
- Product replacement
- Reputation losses

The same batch can cost you much more if it is connected to fatalities!

Until now, assessing the integrity of HEPA filters has not been an exact science!

Until now, there has not been a consistent, reliable, and repeatable means of HEPA filter validation!

**With PASport™ you can protect your
patients, product, and processes.
Save time, dollars, and lives!**

PASport™

Terminal Air Filtration Test System

Value and ROI Built Into The PASport™ System:

- PASport™ System improves the accuracy of your HEPA filter test reducing financial risk and repeat testing expense.
- PASport™ System is an innovative and patented smart choice for new construction or retro fitting existing cleanrooms.
- PASport™ System will improve your operation and save time and money with every use!

Amazing 25.76% ROI Annually!

THAT'S TRUE ROI. CONTACT US NOW!

ONE TIME BUY:

Lasts the life of your cleanroom

EXTENDS THE LIFE OF YOUR FILTERS:

Replace filters less frequently

DECREASED TESTING TIMES:

Get back into production reducing employee down time

REDUCES RISK:

Delivers Reliable and Repeatable Results every time

SAFEGUARDS ENVIRONMENT AND EMPLOYEE HEALTH:

Closed loop system never allows PAO to escape into classified area

ELIMINATES FAULTY TEST RESULTS:

Upstream concentration allows you to know with 100 % certainty how much PAO reaches the filter medium and identifies flaws in your system. No more replacing filters that are not actually leaking or leaving bad filters in place compromising your patient's safety
